

Three-dimensional radar device, nicknamed (Mega), it

3D Magic Scanner Radar Device, Model 2024. We thank the manufacturer of this device for its arrival in our Arab region because it is exclusively and specifically for all regions in the world, especially for the soil of the Middle East. Thanks and gratitude to the oldest, largest and best GPR Factories Company, whose motto is excellence, creativity and providing the best to customers.

Allow us to present the best, most accurate and finest device in the world 🌐 which sits at the top of the global devices and industries in the fields of detecting and prospecting for gold, treasures, raw gold, gold nuggets, meteorites, precious stones, diamonds, caves, grottoes, groundwater and artesian wells.

It is considered an advanced electronic electrical device that includes most professional detection systems. The device has the advantage of horizontal imaging 150 meters in front. The device also has a directional sensor radar system.

The professional device is very fast and stable for 3D imaging and provides the user with accuracy in imaging and correct results

It transports you to the place of gold and treasures quickly and accurately without the need for training and experience. It is considered the easiest, best and most accurate in all soil and terrain conditions. It is not affected by any influences on climate, soil or stone minerals at all. It isolates all impurities, metals and mineralized rocks with absolute efficiency.
