

Super Finder Plus device, model 2024

The terrible desert monster device, which has become famous everywhere around the world, as it is a comprehensive and integrated device in terms of its unique quality, operation, and very dangerous performance in hunting targets with extreme accuracy.

A long-range radar directional audio sensor device that works with a professional ionic system equipped with a very smart color touch screen. It is an advanced device that works by remote sensing with multiple systems that allow the user to communicate with the device by controlling the device's wonderful settings, especially the screen lighting and sound, choosing the element or metal, as well as the search area. Automatically

The device can easily detect the depth of the target, and the user can choose the metal to be discovered and searched for, and the range to be searched for can also be chosen according to the desire of the discoverer.

The device detects and searches for an important group of precious metals and elements present in the device and you choose them according to your search request, which are:

Gold - raw gold - silver - diamonds - blanks - emeralds - mercury - antiquities -

The search distance, depending on the choice, starts from 100 to 2000 meters

It detects automatic guidance through arrows indicating the direction of the target, as well as normal guidance

The depth reaches 35 meters quite easily
