

Superfiner 500 device

A wonderful type of device made of gold, specialized in detecting only gold of all kinds. It searches with a remote sensing and guidance system to the target location in a very smart way.

The device works in all places and terrains and is not affected by impurities, metals, or various stones

This device is distinguished by its small size, ease of use and handling, and accuracy

Great results, very fast and very accurate in knowing the center location of the target

The device detects depths of up to 8 meters and a front range of up to more than 500 meters. It detects gold and nothing else.

It works with an external battery that can be charged or replaced
