

THE MOLE Plus device, version 2024, developed

Which works by selecting the scout from the beginning during the walk or the car, in addition to choosing the place and time, i.e. the continent in which the explorer is located, so that the balancing process takes place via satellite to adapt to the climate, land, and terrain of the area you choose before working, so that the work is correct and accurate from the beginning.

The only device that works with the car and moves according to your choice, as well as automatically choosing the place and time for all detection work

The device specializes in searching for gold of all kinds in a new and very advanced way, as it is named after

It is called because it is a new revolutionary device that works with extremely intelligent systems. Now in the market, the developed device with extraordinary modernization discovers completely new methods and systems that differ from the usual and conventional systems.

A very fast device in detecting the locations of gold, even if they are deep in the ground and in the sea

Depths up to 70 metres

Its front range reaches 6 square kilometers

New detection systems:

Long range magnometer detection system

Ionic magnetic field sensing system

Geophysical exploration system

An amazing canonical exploration system using the PPS optical camera

He discovers gold, raw gold, emptiness, treasures and treasures in an amazing way

The innovation and modernization is absolutely amazing, a revolutionary future generation device

It is the world's most brilliant device on the market now. It is an easy, accurate, and high-class device

The device adopts the theory of detection using cameras and sensors that rely on detection using the new built-in system, which is the automatic GPS system

A very fast device for accurately capturing and detecting gold, as well as knowing the entrances to targets, detecting voids and caves, and distinguishing them from others.

It detects gold in a strange way and shows the picture that expresses the presence of gold. The picture varies gradually in terms of moving away and approaching the location of the gold or treasure. This is also the case in detecting voids, caves and entrances to targets.

The device detects raw gold and distinguishes treasures in an excellent way through the colorful screen that guides the explorer to the targets in a very wonderful way.
